22 Checklists

How to use this playbook

Sections 2–6 explain the product so you can demo it with confidence. Sections 7–19 are the money part: who to target, what to charge, exactly what to say and where to spend on ads. Section 22 has printable checklists. All prices and projections are **examples to adapt** to your city and currency — test, measure, adjust.

SECTION 1

The opportunity in one page

01

Every restaurant, café, hotel and beach bar has the same problems: guests wait to order, waiters are overloaded, printed menus are expensive to change, and orders get lost between the table and the kitchen. TableTap fixes all four with one QR code.

1 scan	0 sec	4	∞
guest opens the menu — no app to install	order reaches the kitchen screen instantly	languages incl. Arabic (right-to-left)	restaurants on one platform you control

The business model

You sell TableTap as a **monthly subscription** (SaaS). One server runs all your client restaurants. Each new restaurant costs you almost nothing extra, so every new client is mostly profit. The platform already includes subscription dates, suspension and backups.

You sell

A setup service (menu, photos, QR stands) + a monthly subscription.

They get

Faster service, bigger bills, fewer mistakes, menu changes in seconds.

You earn

Recurring revenue every month — it grows with every client you add.

Your unfair advantage

You already own the tools most software startups pay thousands for:

YOUR TOOL	HOW IT SELLS TABLETAP
Lead Finder	Finds every restaurant/café in a city with owner names, phones, emails and websites.
Website Inspector	Shows which restaurants have no online menu or a bad website — your warmest leads.
MailBlaster	Sends personal cold emails and follow-ups at scale, with tracking and unsubscribe built in.
AdSizer	Produces every ad size for Facebook, Instagram, TikTok and Google in minutes.
File Studio	Converts client PDF menus and photos, removes image backgrounds for beautiful dish photos.

> **The goal of this playbook**
> 10 paying restaurants in 90 days → 50 in 6 months → 100+ in 12 months.

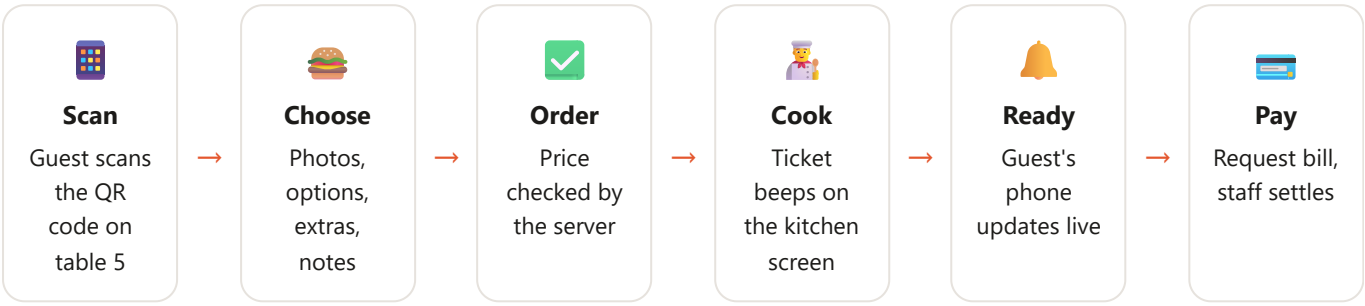

SECTION 2

What TableTap is & how it works

02

TableTap is a complete digital ordering system for dine-in restaurants: a QR menu for guests, a live screen for the kitchen, a control panel for the owner — and a platform for you to manage all your clients.

The order journey

Who uses what

PERSON	SCREEN	WHAT THEY DO
Guest	Phone, via table QR	Browse, order, track the order, call a waiter, ask for the bill — in EN/FR/ES/AR.
Cook	Kitchen tablet / TV	Start and finish tickets, see notes and allergies, mark dishes sold out ("86").
Waiter	Phone or tablet	Live orders, waiter calls, bill requests, mark paid (cash/card), settle a table.
Manager / owner	Computer or phone	Menu, prices, photos, tables & QR printing, staff, reports, settings.
You (platform)	Your admin	All restaurants, subscriptions, suspensions, backups.

Built to be trusted

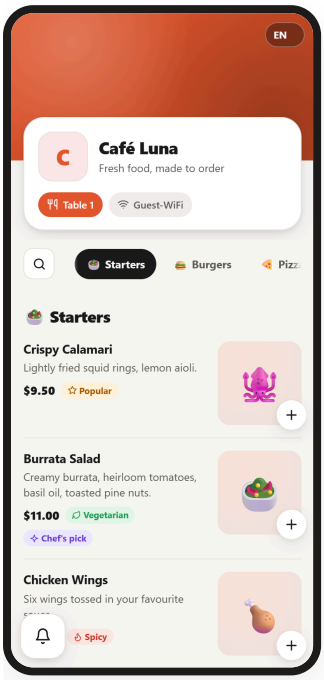

- **Server-side pricing** — guests can't change prices from their phone.
- **Rules enforced** — required options, sold-out items and serving hours.
- **Secure QR codes** — random codes, replaceable in one click if abused.
- **Anti-spam** — limits on orders and waiter calls per table.
- **Separate data** per restaurant; staff roles with limited access.
- **Encrypted passwords**, protected forms, safe photo uploads.
- **Automatic daily backups**, exact money maths, tax & service charge.
- **Tested** — 34 automated tests + full browser tests.

SECTION 3

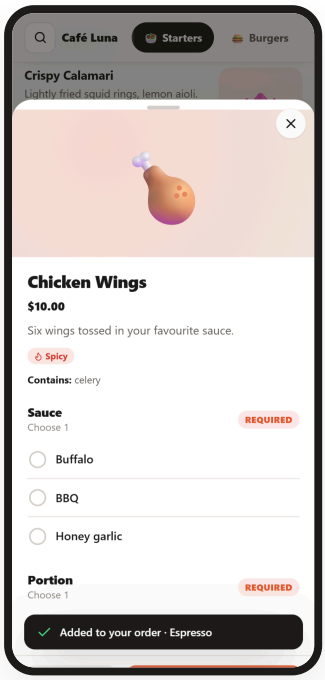

The guest experience

03

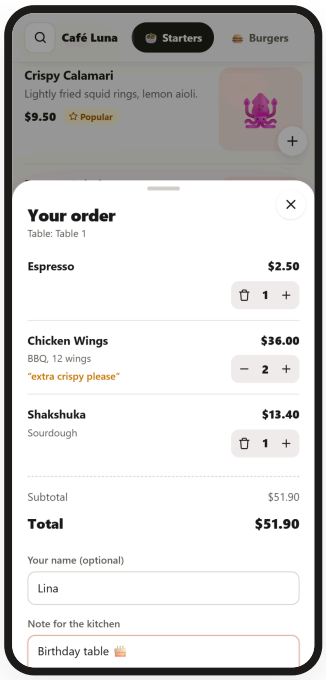

This is what sells the product. Always demo from a phone — owners fall in love when they see their own dishes on it.

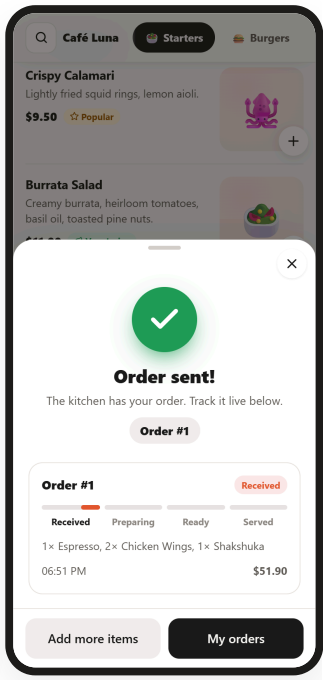

1 · Branded menu with categories

2 · Dish details, options & extras

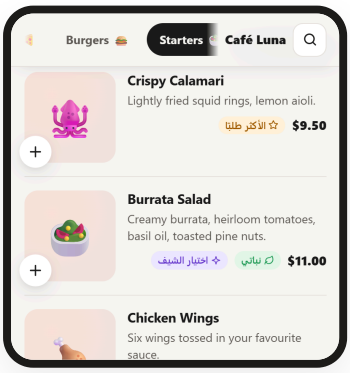

3 · Cart with notes & totals

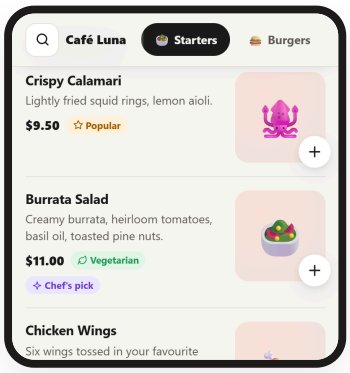

4 · Order sent + live tracking

Features to mention in every demo

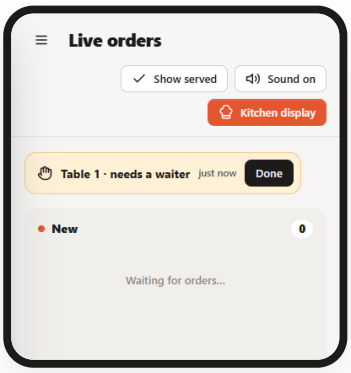

- **No app download** — opens in the phone's browser in 1 second.
- **Photos or emoji tiles**, labels (Popular, Chef's pick, Spicy, Vegan…), allergens and calories.
- **Options & extras with prices** (size, sauce, extra cheese) — this is what raises the average bill.
- **Promo prices** ("was $14, now $11") shown automatically.
- **Live status**: Received → Preparing → Ready → Served, with vibration when ready.
- **Call waiter / Request bill** (cash or card) from the phone.
- **4 languages** incl. Arabic right-to-left — tourists switch in one tap.
- **Wi-Fi password** copied in one tap; breakfast menu auto-hides after 11:30.

Arabic (RTL) menu

"Your order is ready" update

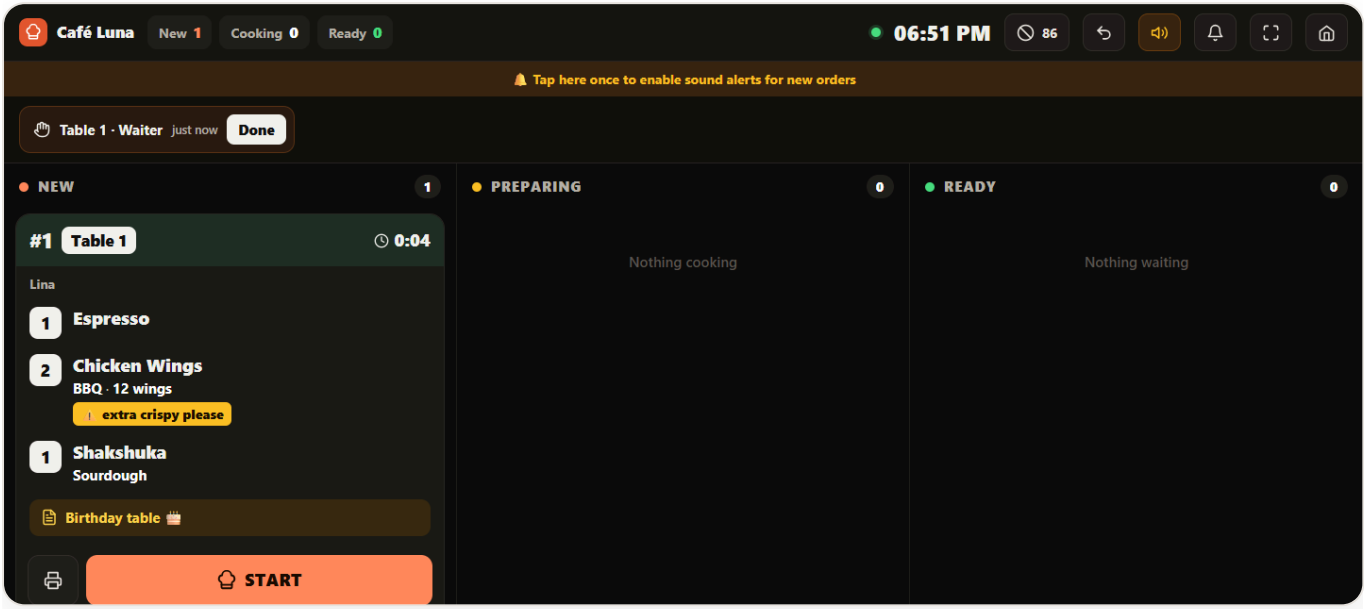

Waiter view on a phone

SECTION 4

Kitchen, staff & owner tools

04

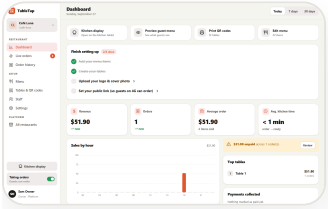

Kitchen display (KDS)

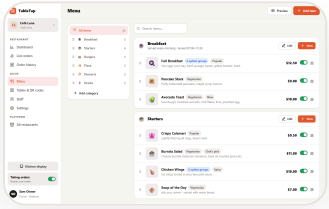

Tickets move New → Preparing → Ready. Timers turn amber at 10 min and red at 20 min.

- Huge readable text, dark screen, works on any tablet or TV with a browser. Sound chime for every new order and repeat reminder if nobody starts it.
- Guest notes in yellow ("extra crispy", "no onions"), allergy notes can't be missed. Tap a line to tick it off.
- **"86" panel**: switch off a dish in one tap — guests instantly see "Sold out". Screen stays awake; reconnects automatically.

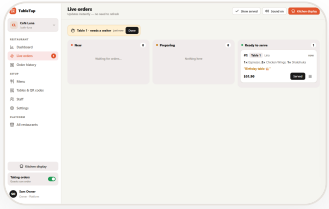

Owner & manager panel

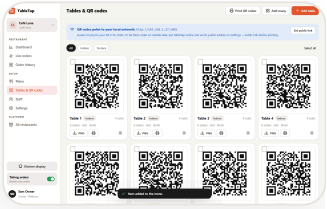

Dashboard: revenue, orders, average bill, kitchen time, best sellers

Menu editor: drag to reorder, stock switch, options

Live orders, waiter calls, bill requests

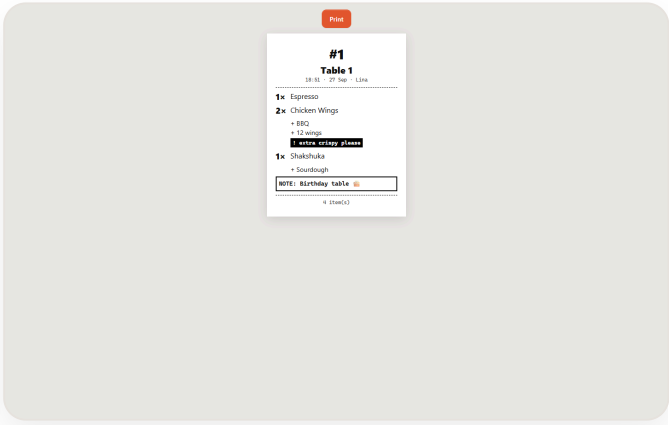

Tables & QR codes with per-table sales

Everything the owner can do

AREA	FEATURES
Dashboard	Today / 7 / 30 days revenue with % vs previous period, orders, average bill, items sold, kitchen time, sales by hour/day chart, best sellers, top tables, payments by method, unpaid alert, setup checklist.
Menu	Categories with icons, descriptions and serving hours (e.g. breakfast 07:00–11:30). Items with photo, emoji, price, promo price, labels, allergens, calories, prep time, option groups (pick one / pick several / required / max), in-stock and visible switches, duplicate, drag-and-drop ordering, "restock all".
Tables & QR	Add one or 200 tables at once, zones (Terrace, Upstairs), seats, per-table sales, download PNG, print table cards (6/page), tent cards (2/page) or stickers (12/page), replace a QR code, pause a table.
Live orders	Accept → Ready → Served, mark paid cash/card, cancel with reason (guest sees it), restore, print kitchen ticket or guest bill, settle a whole table in one click, sound + desktop notifications.
Order history	Filter by status/date, search by number/table/name, order timeline, export to Excel (CSV).
Staff	Accounts for managers, waiters and kitchen with limited permissions; reset passwords; disable instantly.
Settings	Name, logo, cover photo, brand colour, phone, address, Wi-Fi, currency (20 built in), tax included or added, service charge, language, time zone, ordering on/off with message, auto-accept, ask guest name, activity log.

Print-ready QR table cards in the restaurant's colours

80 mm kitchen ticket

SECTION 5

Your platform — the business engine

05

As the platform owner you see every restaurant you sell to, and you control who is active.

YOU CAN…	WHY IT MATTERS FOR MONEY
Create a restaurant + its manager login in 30 seconds (optionally with the demo menu)	Fast onboarding = more clients per week.
Set a **plan** and a **"paid until" date**; extend 30 days or 1 year in one click	Subscriptions tracked without spreadsheets.
Suspend / activate	Unpaid? Guests see "menu unavailable" until payment — strong reason to pay on time.
See each restaurant's orders and revenue (30 days) and last order	Spot inactive clients before they cancel; show value at renewal.
Open any restaurant's admin to help them	Fast support without asking for passwords.
Download a full backup	Protects your business and your clients' data.

> **Rule: never let a client run unpaid for long**
>
> Give a 7-day grace period, then suspend. Reactivate the moment they pay. Put this in your terms.

SECTION 6

Going live: hosting & setup

06

Important: on your PC, the QR codes only work for guests on the same Wi-Fi. To sell it as a service, TableTap must be **online** so any guest on 4G/5G can order.

1. **Buy a domain**

   e.g. tabletap-yourcity.com (≈ $10–15/year). Short and easy to type.

2. **Rent a small server (VPS)**

   2 GB RAM is plenty for your first 50–100 restaurants (≈ $5–12/month at Hetzner, DigitalOcean, Contabo, OVH…). Choose a data centre close to your customers.

3. **Install TableTap + HTTPS**

   Copy the folder, `pip install -r requirements.txt`, run behind Caddy or nginx for free HTTPS certificates. Set `TABLETAP_PUBLIC_URL`, `TABLETAP_TRUST_PROXY=1`, `TABLETAP_SECURE_COOKIES=1`. Run it as a service so it restarts automatically.

4. **Point the domain to the server**

   DNS A-record → server IP. Test from a phone on 4G.

5. **Backups off the server**

   Daily backups are created automatically; also copy them weekly to another place (your PC or cloud storage).

6. **Create your demo restaurant**

   Beautiful photos, 20+ dishes, a printed tent card with its QR code — this is your sales weapon.

> **Alternative for a single restaurant**
>
> Run TableTap on the restaurant's PC and expose it with a *named* Cloudflare Tunnel on your domain. Don't use temporary tunnel URLs — they change and break printed QR codes.

SECTION 7

Who to sell to

07

Best targets (start here)

SEGMENT	WHY THEY BUY	PRIORITY
Busy cafés & brunch places	Many small orders, few staff, young guests who love ordering by phone.	TOP
Casual restaurants, burger & pizza	Lots of options/extras → bigger bills; rush hours overload waiters.	TOP
Hotels, beach clubs, pool bars, rooftops	Guests spread out, tourists need other languages, high prices.	TOP
Food courts & shisha lounges	Many tables, repeat orders during the evening.	GOOD
New restaurants about to open	No printed menus yet; open to new systems; buying everything anyway.	GOOD
Fine dining	Prefer waiters at the table — pitch the *menu-only* plan and multi-language.	LATER

Signs a restaurant needs TableTap

- Paper menus with prices crossed out or stickers on top
- Reviews complaining about slow service or long waits for the bill
- No online menu, or a PDF menu on Instagram
- Tourist area / multi-language guests
- Big terrace far from the counter
- Recently opened or renovating

Who decides

Talk to the **owner** (small places) or the **general manager / F&B manager** (hotels, groups). Waiters and cooks are allies in the demo — they feel the pain every night — but they don't sign.

Best time to contact

CHANNEL	BEST TIME	AVOID
Walk-in visit	Tue–Thu, 15:00–17:30 (between lunch and dinner)	Lunch/dinner rush, Friday night, weekends
Phone / WhatsApp	10:00–11:30 or 15:00–17:00	12:00–14:30, 19:00–22:30
Email	Tue–Thu mornings	Friday evening, weekends

SECTION 8

Why owners buy: value & ROI

08

Owners don't buy software. They buy **more money, less stress**. Always translate features into money.

FEATURE	BENEFIT YOU SAY TO THE OWNER
Photos, options, extras, labels	"Guests add more when they see the food and the extras — your average bill goes up."
Instant order to kitchen	"No waiting for a waiter — tables order sooner, eat sooner, and free the table sooner."
Kitchen screen with notes	"No lost or misheard orders, no wasted plates."
Edit prices anytime	"No more reprinting menus — change a price in 10 seconds."
4 languages	"Tourists order confidently — no pointing at the menu."

The ROI conversation (use their numbers)

Ask the owner: "*How many orders a day? What's your average bill?*" Then calculate together:

EXAMPLE CAFÉ	VALUE
Orders per day	120
Average bill	$12.00
If extras/photos add just **5%** to the bill	+$0.60 per order
Extra revenue per month (120 × $0.60 × 30)	+$2,160
TableTap Standard plan	−$39
Return on the subscription	**≈ 55× the cost**

> **Be honest with numbers**
> The 5% is an example for the conversation, not a promise. Say: "Even if it only adds 1% it pays for itself." After a month, show them the real numbers from their dashboard.

Your one-sentence pitch

ELEVATOR PITCH

"TableTap lets your guests order from their table by scanning a QR code — the order goes straight to your kitchen screen, so you serve faster, sell more extras, and never reprint a menu again. I'll set it all up for you, and the first 14 days are free."

SECTION 9

Pricing & plans

09

Simple plans, monthly or yearly, plus a one-time setup fee. Prices below are **starting points** — adjust to your market after 10 sales conversations.

Menu

$19/month

≈ $9/month in lower-price markets

- QR digital menu, photos, 4 languages
- Unlimited edits & sold-out switch
- Browse-only (no ordering)
- Printed QR cards

MOST POPULAR

Standard

$39/month

≈ $19/month in lower-price markets

- Everything in Menu
- **Table ordering** + live tracking
- **Kitchen display** + sound alerts
- Waiter calls & bill requests
- Dashboard, reports, CSV export
- Staff accounts

Pro

$69/month

≈ $35/month in lower-price markets

- Everything in Standard
- Priority WhatsApp support
- Monthly performance report
- Menu updates done for them
- Photo session / styling help

EXTRA	SUGGESTED PRICE	NOTES
Setup fee (menu entry, photos cleanup, configuration, training)	$49 – $149	Waive it for your first 5 clients (case studies).
Acrylic QR table stands	cost + 50–100%	Buy in bulk; logo-printed stands look premium.
Kitchen tablet (resold, preconfigured)	cost + 20–30%	Optional — any browser device works.
Each extra location	−20% per location	Groups and chains.
Yearly payment	2 months free	Improves cash flow and locks the client in.

Pricing rules that make more money

- **Anchor high, sell the middle:** show all three plans — most people choose Standard.
- **Free trial 14 days, not 30:** long enough to feel the value, short enough to create urgency.
- **Charge the setup fee** once you have 5 happy clients — your time is valuable.
- **Price in local currency** (the app supports 20 currencies incl. MAD, EUR, AED, SAR, TND, DZD, EGP).
- **Founding-client offer:** first 10 restaurants get their price locked for life. Creates urgency without discounts forever.
- Never compete on price alone — compete on **setup done for them + local support**.

SECTION 10

Money math: costs, profit, goals

10

Your monthly running costs (example)

COST	PER MONTH
VPS server (upgrade when you pass ~100 restaurants)	$10 – $40
Domain (yearly ÷ 12)	$1
Off-site backup storage	$0 – $5
Email sending (your SMTP / provider)	$0 – $20
Ads budget (see Section 14)	$150 – $600
Phone / internet / transport for visits	your cost

Revenue at the Standard price ($39/month)

PAYING RESTAURANTS	MONTHLY REVENUE	YEARLY REVENUE	MILESTONE
10	$390	$4,680	Proof it works (90 days)
25	$975	$11,700	Covers ads + costs comfortably
50	$1,950	$23,400	Part-time salary (6 months)
100	$3,900	$46,800	Full-time business (12 months)
250	$9,750	$117,000	Hire sales + support

Plus setup fees and hardware margin. Mixed plans (Menu/Standard/Pro) usually average close to the Standard price. These are illustrations, not guarantees.

The three numbers that decide if you win

CAC

Cost to win one client = (ads + your time + gifts) ÷ new clients. Target: **less than 3 months of subscription**.

Churn

% of clients cancelling each month. Target: **under 3%**. Good onboarding + support keep it low.

LTV

Lifetime value = monthly price ÷ churn. $39 ÷ 3% ≈ **$1,300** per client. You can afford to spend to win clients.

Simple rule

If a client is worth ~$1,300 over their lifetime, spending $50–150 in ads and time to win them is a great deal. Don't be afraid to invest in acquisition once your trial-to-paid rate is proven.

SECTION 11

Sales system (the pipeline)

11

Selling is a machine with stages. Track every restaurant in one of these stages (a spreadsheet is fine at the start).

1 **Find — build a list of 300 restaurants in your city**

Use **Lead Finder** by category (restaurant, café, hotel, bar) and area. Export name, phone, email, website, address, rating.

2 **Qualify — score each lead A / B / C**

A = busy, 4+ rating, many reviews, paper/PDF menu or tourist area. **B** = decent. **C** = tiny or closing. Run **Website Inspector** on their site: no menu page or slow site = A. Start with A leads only.

3 **Personalise — prepare a mini-demo for A leads**

Create their restaurant in your platform with their name, colour, logo and 5–8 real dishes from their Instagram/Google photos. Print one tent card with its QR. **This is the #1 closing trick.**

4 **Contact — multi-channel sequence (Section 12)**

Day 1 email (MailBlaster) → Day 3 WhatsApp → Day 5 walk-in with the printed QR → Day 9 follow-up email → Day 14 last message.

5 **Demo — 10 minutes, on the owner's phone**

Let *them* scan and order. The kitchen screen beeps on your tablet. Show the dashboard. Ask the ROI questions (Section 8).

6 **Trial — 14 days, fully set up by you**

Full menu, QR stands on tables, 15-minute staff training. Visit/call on day 2 and day 7.

7 **Close — day 12–14**

Show their numbers (orders through TableTap, average bill, best sellers). Offer yearly (2 months free) first, then monthly. Ask for a video testimonial and 2 referrals.

Weekly activity targets (solo founder)

ACTIVITY	PER WEEK	EXPECTED RESULT (TYPICAL RANGES)
Personal cold emails	150–250	5–15 replies
WhatsApp / calls	40	5–10 conversations
Walk-in visits	15–20	4–8 demos
Demos	8–12	3–5 trials
Trials started	3–5	1–3 paying clients

SECTION 12

Scripts: email, WhatsApp, walk-in, phone

12

Replace {brackets}. Keep it short, personal and honest. Always email the business address, include your name and an easy way to opt out (MailBlaster adds the unsubscribe link).

EMAIL 1 — DAY 1 · SUBJECT: {RESTAURANT} MENU ON EVERY TABLE

Hi {First name},

I made a quick live demo of {Restaurant}'s menu with table ordering — scan this from your phone: {demo link}

Guests scan the QR on the table, order with photos and extras, and the order appears instantly on your kitchen screen. No app, no waiting for the waiter, and you can change prices in seconds.

I set everything up for free and you can try it for 14 days. Worth a 10-minute look this week?

{Your name} · {phone} · TableTap

EMAIL 2 — DAY 4 · SUBJECT: RE: {RESTAURANT} MENU

Hi {First name}, just making sure you saw the demo I built for {Restaurant}: {demo link}.
Cafés using table ordering serve rush hours with fewer waiters, and guests add more extras when they see photos.
Can I drop by Tuesday or Wednesday afternoon for 10 minutes?

EMAIL 3 — DAY 10 · SUBJECT: CLOSE THE LOOP?

Hi {First name}, I don't want to fill your inbox. If digital ordering isn't a priority right now, no problem — just reply "later" and I'll check back in a few months. If you'd like to try it free for 14 days, reply "yes" and I'll set it up. Thanks!

WHATSAPP — DAY 3

Hello {First name} 👋 I'm {name} from TableTap. I built a free demo of {Restaurant}'s menu where guests order from the table by QR: {demo link}
Can I show you in 10 minutes this week? I'll bring the QR stand so you can test it with your team 😊

WALK-IN SCRIPT (3–5 PM) — 60 SECONDS

"Hi, is the owner or manager around? … Hi {name}, I'm {your name}. I help cafés in {area} serve faster with QR ordering. I actually built a demo with your menu — can I show you, it takes one minute?"

[Hand them the tent card. Let them scan with THEIR phone. Let them order a dish. Turn your tablet — the kitchen screen beeps with their order.]

"That's it — the guest orders, your kitchen sees it instantly, and you change prices whenever you want. I set everything up myself: full menu, QR stands, training. You try it 14 days free. If your team doesn't love it, I take it back. Shall we start Monday?"

PHONE CALL — 45 SECONDS

"Hi, this is {name}. Quick question — who takes care of the menu and the ordering system at {Restaurant}? … Great. I've built a demo of your menu where guests order from the table with a QR code; it goes straight to the kitchen. Most owners like seeing it on their phone. Can I send you the link on WhatsApp, and pass by for 10 minutes on Tuesday or Wednesday afternoon?"

CLOSING THE TRIAL — DAY 12

"In 12 days you had {N} orders through TableTap, average bill {X}, and your best seller was {dish}. Your team says rush hours are easier. To keep it running, it's {price} per month — or pay yearly and you get 2 months free. Which works better for you?"

ASKING FOR REFERRALS — AFTER THE FIRST MONTH

"I'm really happy it's working for you. Do you know 2 other owners who would like this? For each one who joins, you get a free month."

TESTIMONIAL REQUEST

"Could I film you for 15 seconds saying what changed since you started? Just your honest words — it helps me a lot. I'll send you the video so you can post it too."

SECTION 13

Handling objections

13

THEY SAY	YOU ANSWER
"My guests are old / won't use it."	"They don't have to — waiters still take orders the normal way. The QR is an extra option. Let's look at the numbers after 14 days."
"It will replace my waiters' personal service."	"It removes the boring part — running back and forth with orders and bills — so they spend more time with guests."
"Too expensive."	"It's about {price ÷ 30} per day — less than one coffee. If it adds one extra dessert a day, it's paid."

"I already have a QR menu (PDF)."	"A PDF can't take orders, show sold-out items, update prices instantly, or send orders to the kitchen. Let me show you the difference."
"I don't have time to set it up."	"You don't need any — I build the whole menu, print the QR stands and train your team."
"What if the internet goes down?"	"Guests use their own mobile data, and your staff can take orders normally as always. Nothing stops."
"Guests will prank-order."	"Each table has its own secret code, orders are limited per table, and staff can cancel or replace a QR in one click."
"I need to think about it."	"Of course. The trial is free and you can stop anytime — thinking is easier when you see real orders. Shall I set it up Monday?"

SECTION 14

Advertising strategy

14

Ads work best **after** you have 3–5 real clients, a landing page and testimonials. Before that, direct outreach (Sections 11–12) is cheaper and teaches you what owners want.

> **The funnel**
>
> Ad (video of real ordering) → landing page with a demo QR + pricing → lead (form or WhatsApp) → **call within 1 hour** and book a demo → 14-day trial → paid.

1 · Meta ads (Facebook + Instagram) — main channel

SETTING	RECOMMENDATION
Objective	**Leads** (instant form) or **Messages** (click-to-WhatsApp). Start with WhatsApp — owners reply faster.
Location	Your city + 20–40 km. Add tourist cities later.
Audience	Age 25–60; interests such as restaurant management, restaurant owners, hospitality industry, café, food service, small business owners. Let Meta's broad targeting learn after 50+ leads.
Budget	Test: **$5–10/day for 14 days** with 3 different creatives. Keep the winner, pause the rest, then raise 20% every 3 days if cost per lead stays good.
Creatives	15–30 s vertical video: phone scans QR → orders → kitchen screen beeps → food arrives. Plus 1 carousel (menu → cart → kitchen → dashboard). Make all sizes with **AdSizer** (1:1, 4:5, 9:16).
Retargeting	People who watched 50% of the video or visited the landing page: testimonial video + "14 days free, setup included".

Ad copy examples

AD A — SPEED

Rush hour, not enough waiters? 🍽️
Guests scan the QR, order from the table, and your kitchen sees it instantly.
✅ Setup done for you ✅ 14 days free
→ Send us a message for a free demo

AD B — MONEY

Menus with photos sell more. 📸
Show every dish, every extra, every promo — and change prices in 10 seconds.
TableTap — QR menu + table ordering for restaurants.
→ Try it free for 14 days

AD C — TOURISTS

Your guests speak 4 languages. Does your menu? 🌍
English, French, Spanish, Arabic — one QR code on every table.
→ Get your free demo

AD D — SOCIAL PROOF

"Since TableTap, our terrace orders twice as fast." — {Owner}, {Café}
Join {N} restaurants in {city}.
→ Book a 10-minute demo

2 · Google Search ads — people already looking

Small budget ($5–15/day), exact and phrase match keywords in your languages:

- "QR code menu for restaurant"
- "digital menu restaurant"
- "restaurant ordering system"
- "table ordering app"
- "kitchen display system"
- "menu QR code restaurant {city}"
- "menu digital restaurant" (FR/ES)
- "système de commande restaurant"
- "قائمة طعام رقمية" (AR)
- Negative keywords: free generator, template, jobs, download

Send clicks to a landing page with a **live demo QR**, 3 plans, testimonials, and a WhatsApp button. Also create a free **Google Business Profile** for TableTap.

3 · Other channels

CHANNEL	HOW TO USE IT	COST
TikTok & Reels (organic)	Behind-the-scenes of real installs, before/after, kitchen screen beeping. 3–5 videos/week.	Free
LinkedIn	Connect with hotel F&B managers and restaurant group directors. Share case studies.	Free
Facebook groups	Local restaurant owner / hospitality groups — helpful posts, not spam.	Free
Partners	POS installers, restaurant suppliers, accountants, interior designers — 20% recurring commission.	Commission
Printed proof	Every QR stand has a small "Powered by TableTap" line — thousands of guests see it.	Almost free
Local events	Hospitality fairs, chambers of commerce, culinary school events.	Low

Ad budget plan (first 90 days)

PERIOD	SPEND	GOAL
Month 1	$0 on ads	Direct outreach only. Get 3–5 clients, film testimonials, build landing page.
Month 2	$150–300 (Meta test)	Find the winning creative; target cost per lead under ~$10–20.
Month 3	$300–600 (Meta + Google)	Scale the winner; add retargeting; measure trial→paid rate.

> **Stop-loss rule**
>
> If an ad spends 3× your target cost per lead with no leads, pause it. If leads come but nobody books a demo, the problem is the landing page or your follow-up speed — call every lead within 1 hour.

Ad KPIs to watch

CTR	Cost / lead	Lead → demo	Trial → paid
aim > 1%	aim < $20	aim > 30%	aim > 40%

Targets are typical starting benchmarks — your market will differ. Compare against your own first month.

SECTION 15

Social media & content plan

15

Post where restaurant owners scroll: Instagram, TikTok, Facebook. Real restaurants beat polished graphics.

DAY	CONTENT IDEA	FORMAT
Monday	"Rush hour" — the kitchen screen filling up with orders on a Friday night	Reel / TikTok
Tuesday	Tip for owners: "3 menu photos that sell more desserts"	Carousel
Wednesday	Install day: printing QR stands, training the team, first order	Reel / Stories
Thursday	Client testimonial (15 seconds)	Reel
Friday	Before/after: paper menu with crossed prices → TableTap	Image / Reel
Weekend	Guests reacting to ordering from their table	Stories

10 video hooks that stop the scroll

1. "This café fired its paper menus."
2. "Watch how fast table 7 gets its food."
3. "Restaurant owners, stop reprinting menus."
4. "The waiter didn't take this order."
5. "How this terrace doubled its orders."
6. "POV: you're a cook and the screen beeps."
7. "Your menu in 4 languages in 1 minute."
8. "3 things guests hate about ordering."
9. "I set up a restaurant's ordering in 1 hour."
10. "What your menu is costing you."

Landing page — what it must contain

1. Headline: **"Your menu on every table. Orders straight to your kitchen."**
2. 30-second video + a **demo QR code** visitors can scan right now.
3. 3 benefits (faster service · bigger bills · no reprinting).
4. Screenshots: guest phone, kitchen screen, dashboard (use the ones in this playbook).
5. Pricing (3 plans) + "Setup included · 14 days free · Cancel anytime".
6. Testimonials with photos, logos of client restaurants.
7. FAQ (internet, prank orders, old guests, languages).
8. Big WhatsApp button + short form (name, restaurant, phone).

SECTION 16

Onboarding a new restaurant

16

A perfect first week = a client for years. Target: from "yes" to live in 48 hours.

1 **Collect (day 0)**

Menu (photo/PDF — convert with File Studio), logo, dish photos, prices, tax rules, table list/zones, Wi-Fi name, staff names & roles.

2 **Build (day 1)**

Platform → New restaurant (plan + paid-until date + manager login). Settings: logo, cover, colour, currency, tax, language, time zone. Categories with serving hours; items with photos, options and extras; mark popular items.

3 **Tables & QR (day 1)**

Add tables in bulk with zones. Print table cards or tent cards; put them in acrylic stands. Test-scan every single QR code.

4 **Kitchen (day 2)**

Tablet or TV with the kitchen account, full screen, sound enabled, "keep awake". Print test ticket if they use a printer.

5 **Train (day 2, 15 minutes)**

Waiters: live orders, calls, settle a table, mark paid. Kitchen: start/ready, 86 switch. Manager: change a price, mark sold-out, dashboard.

6 **Go live + stay close**

Be there for the first service if possible. Call on day 2 and day 7. Fix small things fast — it builds trust.

SECTION 17

Keeping clients (retention)

17

- **Monthly value message** (WhatsApp or email): "This month: {orders} orders, {revenue} through TableTap, best seller {dish}." Numbers from their dashboard.
- **Watch activity** on your platform page: a restaurant with no orders for 7 days = call them today.
- **Fast support**: reply on WhatsApp within 1 hour during service times.
- **Seasonal updates**: offer to refresh photos and menus for Ramadan, summer, holidays.
- **Yearly plans**: offer the switch to every happy monthly client after 3 months.
- **Exit interview**: when someone cancels, ask why — then fix it for everyone.

SECTION 18

90-day launch plan

18

Week 1	Buy domain + VPS, put TableTap online with HTTPS. Build your demo restaurant with great photos. Print 10 demo tent cards. Create WhatsApp Business account and email signature.
Week 2	Lead Finder: 300 restaurants in your city. Qualify A/B/C. Build personalised mini-demos for the top 30 A leads. Write your sequences in MailBlaster.
Week 3	Send emails to 30 A leads/day. 15 walk-ins. Goal: 8 demos, 3 free trials. Offer "founding client" price lock.
Week 4	Install trials in 48 h, train staff, check-in calls. Keep outreach going. Film everything (content for later).
Weeks 5–6	Close first trials (target 3 paying). Record 2–3 testimonials. Build the landing page with real screenshots, prices and videos. Start posting 3–5 videos/week.
Weeks 7–8	Launch Meta ads test ($5–10/day, 3 creatives). Keep 150+ emails/week and 15 visits/week. Target 6 paying clients.
Weeks 9–10	Scale the winning ad. Add Google Search ads. Start the referral program (1 free month per referral). Contact 5 potential partners (POS installers, suppliers).
Weeks 11–12	Target **10+ paying restaurants**. Introduce the setup fee for new clients. Review numbers (Section 19), double down on the channel with the lowest cost per client. Plan the next city or segment (hotels, beach clubs).

Daily routine that makes money

Morning: 30 personalised emails + follow-ups. Midday: create mini-demos, answer leads. 15:00–17:30: walk-ins and demos. Evening: content (1 video), plan tomorrow's list.

SECTION 19

Numbers to track every week

19

METRIC	WHERE TO FIND IT	GOOD SIGN
Leads contacted	MailBlaster + your sheet	200+/week
Demos → trials	Your sheet	> 40%
Trials → paid	Platform page	> 40–50%
MRR (monthly recurring revenue)	Paying clients × price	Up every month
Churn	Cancelled ÷ active	< 3%/month
Cost per new client	(Ads + costs) ÷ new clients	< 3 months of subscription

SECTION 20

Legal & professional basics

20

General guidance, not legal advice — check the rules in your country with a local accountant or lawyer.

- **Register a business** (sole trader / auto-entrepreneur / company) so you can invoice, open a business bank account, and get WhatsApp Business verification.
- **Simple contract / terms of service**: plan, price, billing date, 7-day grace then suspension, cancellation notice, who owns the menu content, support hours, uptime "best effort".
- **Privacy policy**: you store guest names, notes and orders on behalf of the restaurant. Explain what, why, how long, and how to delete. Respect GDPR if you have EU guests/clients.
- **Invoices** for every payment; keep records for taxes.
- **Email marketing**: business addresses only, honest subject lines, your identity, unsubscribe link, stop when asked. (MailBlaster handles unsubscribe + suppression.)
- **Security habits**: strong platform password, backups copied off the server weekly, server updates monthly.
- **Allergen info**: remind restaurants they are responsible for the allergen data they enter.

SECTION 21

12-month roadmap & upsells

21

WHEN	ADD TO THE PRODUCT	WHY IT MAKES MONEY
Months 1–3	Landing page, online hosting, Windows installer for single-restaurant installs	Everything needed to sell
Months 3–6	Online payment at the table (Stripe or local gateway), tips	Premium plan + faster table turnover
Months 3–6	Automatic receipt-printer printing in the kitchen	Kitchens that prefer paper tickets
Months 6–9	Takeaway / pickup ordering from the restaurant's Instagram link	New revenue for clients = higher plan
Months 6–9	Guest feedback & Google review prompt after the meal	Owners love more 5-star reviews
Months 9–12	Loyalty (stamps/points), happy-hour pricing, multi-location reports	Pro plan for groups and chains

> **Upsell ladder**
> Menu → Standard → Pro → multi-location. Every client who grows should move up a plan.

SECTION 22

Checklists

22

Before selling

- ☐ Domain + VPS + HTTPS working
- ☐ Public link set in Settings
- ☐ Demo restaurant with 20+ photographed dishes
- ☐ 10 printed demo tent cards
- ☐ WhatsApp Business + professional email
- ☐ Price list in local currency
- ☐ Simple contract + privacy page
- ☐ Lead list of 300 restaurants (Lead Finder)

Demo bag

- ☐ Phone with the demo link bookmarked
- ☐ Tablet showing the kitchen display
- ☐ Printed QR tent cards (demo + theirs)
- ☐ One-page price sheet
- ☐ Business cards
- ☐ Mobile data / hotspot (never rely on their Wi-Fi)

New client setup

- ☐ Restaurant created with plan + paid-until
- ☐ Logo, cover, colour, currency, tax, language, time zone
- ☐ Menu with photos, options, allergens
- ☐ Tables + zones, QR printed and tested
- ☐ Kitchen tablet: full screen, sound on
- ☐ Staff accounts created, team trained
- ☐ First live order placed together
- ☐ Day-2 and day-7 check-in calls booked

Every week

- ☐ 200+ contacts (email, WhatsApp, visits)
- ☐ 8–12 demos
- ☐ 3–5 new videos posted
- ☐ Check platform: inactive clients → call
- ☐ Renewals due this week → invoice
- ☐ Review ad results, pause losers
- ☐ Copy backup off the server
- ☐ Update your numbers (Section 19)

The formula

Great demo (their own menu on their phone) + setup done for them + 14 days free + fast support = restaurants that pay every month and tell their friends. Repeat it every day for 90 days.

TableTap · Product & Business Playbook · v1.0
